FOREWORD

This booklet contains miniature descriptive sketches of working drawings developed by the Farm Security Administration of the United States Department of Agriculture. It has been prepared primarily for the use of County Committees, Rural Supervisors and Home Management Supervisors to aid prospective Tenant Purchase borrowers in selecting a farm home, suitable outbuildings, and sanitary conveniences.

Plans illustrated have been developed for use in the States of Oklahoma and Texas. The governing factors in the design are structural soundness; minimum sizes for health; comfort and storage; maximum natural lighting and ventilation; arrangement for both compactness and convenience; and the elimination of purely decorative features. Materials of standard sizes may be fitted in the plan dimensions with a minimum cutting loss. Specifications permit the use of local products, thereby eliminating costly transportation charges for imported materials.

Local building contractors throughout Oklahoma and Texas are fast becoming familiar with plans for farm buildings standardized by the Farm Security Administration. They are learning from experience the actual cost of each building. Through competitive bidding by local contractors construction costs are held to the minimum.

Realizing that no typical plan can ever completely satisfy all ideas and requirements, the dwellings and barns have been designed in a manner that will permit rearrangement, with certain limitations, to meet the individual family needs and farm plan without the necessity of preparing additional plans and specifications. Tenant Purchase Engineers will explain these limitations upon request.

Tenant Purchase borrowers are not limited to the plans contained in this booklet but are free to select structures planned by other individuals or agencies, provided such plans and specifications are approved by the District Engineer. The cost of securing working drawings and specifications not contained in this booklet must be borne by the borrower and cannot be paid out of loan funds.

The schedule of Average Cost is based on erection by the contract method and is the average throughout the region for the particular type of building. Prices vary with local wage rates, material costs, and competition in bidding.

Working drawings and specifications for buildings shown in the booklet are available free of charge to Tenant Purchase borrowers. Working drawings covering dwellings are available reversed and can be secured in that form by adding "R" to the plan number. Request for copies should be made through the County Rural Supervisor to the District Engineer.

CONCLUSIONS

The project of a new building descriptive statistics of various buildings reviewed by the Bureau of Building Statistics of the United States Department of Commerce. It has been prepared primarily for the use of building owners, architects and engineers, and is intended to be a guide in the selection of a new building, and in the construction of a new building.

Plans presented have been developed for use in the State of Oklahoma and Texas. The building shown in the plan was designed to accommodate a building for the use of a building owner, and is intended to be a guide in the selection of a new building, and in the construction of a new building. The plan is intended to be a guide in the selection of a new building, and in the construction of a new building.

Plans presented have been developed for use in the State of Oklahoma and Texas.
